DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 is indefinite since "said guide" on line 1 lacks proper antecedent basis.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 1 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Schoeps '060.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schoeps '060 in view of Pusateri et al. '389 or Karden.

The tool of Schoeps discloses the invention substantially as claimed including a guide and locking arrangement 56, 58 on the handle 16 and housing 10, wherein the handle 16 is longitudinally adjustable on the housing, and including pneumatic ports which provide power to the tool regardless of the adjusted handle position (note: Fig. 3 and column 4, lines 44-53). However, Schoeps '060 lacks the tool being electric with contacts, as well as the tongue and groove arrangement between the handle and housing. Pusateri et al. '389 and Karden disclose tools wherein handles are connected to housing via tongue and groove arrangements. Therefore, it would have been obvious to one skilled in the art to couple the handle and housing of the tool of Schoeps '060 via a tongue and groove arrangement in order to more effectively retain the elements and allow for an alternate means of smooth movement between the elements during adjustment. It would have been obvious to one skilled in the art to configure the tool of Schoeps '060 as an electric tool, with rails and electric contacts between the handle and housing as a means to ensure electric contact between the housing and handle regardless of the adjusted position, since such a modification is within the engineering

purview of the skilled artisan concerned with utilizing an electric power means as an alternate for a pneumatic power means.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bluemink et al., Schmuck, Danielson, Griffith, Ebbert, Menke et al, Pusateri et al. '354, and Harris et al. disclose various related tools.
